## Work Experience

### PNJ GROUP, SOFTWARE ENGINEER

Ho Chi Minh City, June 2025 - Present

- Managed the Next.js storefront for an e-commerce site with **50,000** daily active users, ensuring the website stays stable during high-traffic sales.
- Optimized database queries and implemented async processing with AWS SQS, reducing API response time by **~40% (1060ms → 640ms)**.
- Built serverless APIs using AWS Lambda and API Gateway, handling **10K+** requests/day with **99.9%** uptime.
- Reduced order sync time from **1 hour to 2 minutes** for **73,000** orders by migrating a Laravel background job to AWS Lambda and using batch database queries.
- Implemented promotion feature (frontend section, discount API integration, exception handling), increasing product page → add-to-cart conversion rate by **25%** within **1 month** of launch.
- Set up automated CI/CD using **AWS CodeBuild** and **Docker**, making the deployment process faster and reducing manual errors for the team.
- Designed and implemented a Speckit-compliant AI-powered recruitment system that integrates AI throughout the SDLC, reducing handoff time and manual effort between Product Owners, Developers, and QA Engineers.

**Tech Stack:** Next.js, React, TypeScript, Node.js, AWS Lambda, AWS SQS, AWS API Gateway, AWS CodeBuild, Docker, PostgreSQL, REST API, CI/CD

## Projects

### FLAGSHIP - SELF-HOSTED FEATURE FLAG PLATFORM

Personal Project, 2024 - 2025

- Built a self-hosted feature flag platform with Fastify 5 + TypeScript backend, Next.js 15 dashboard, and a zero-dependency JavaScript SDK.
- Designed local flag evaluation architecture — the SDK loads rules on init and evaluates flags in-process with no network round-trips, similar to LaunchDarkly.
- Multi-tenant model with PostgreSQL (Prisma ORM), Redis, real-time updates via SSE, percentage rollouts (MurmurHash3), targeting rules, analytics, and webhooks. Deployed via Docker Compose.

**Tech Stack:** Fastify, TypeScript, Next.js, PostgreSQL, Prisma ORM, Redis, Docker Compose, SSE, SDK Design

### CYBERSHARK - E-COMMERCE PLATFORM

Personal Project, 2023 - 2024

- Full-stack e-commerce app with ReactJS (Redux Toolkit, Tailwind CSS) frontend and ASP.NET backend, backed by MySQL.
- Implemented full shopping flow: user auth, product catalog, cart, order management, and a separate admin panel for inventory control.

**Tech Stack:** React, Redux Toolkit, Tailwind CSS, ASP.NET, C#, MySQL, REST API

## Skills

- Languages:** JavaScript, TypeScript, SQL, PHP
- Frontend:** React.js, Next.js, Inertia, Redux, Tailwind CSS, HTML/CSS
- Backend:** Node.js, Laravel, ASP.NET, RESTful APIs
- Cloud & DevOps:** AWS (Lambda, SQS, API Gateway, CodeBuild), Docker, CI/CD
- Databases:** MySQL, SQL Server
- AI-Assisted Development:** Prompt engineering, AI-assisted coding, debugging, code review, documentation generation, and workflow automation
- Others:** Git, Agile/Scrum, Problem Solving

## Education

### University of Information Technology, VNUHCM UIT

Ho Chi Minh City, Vietnam

B.S. IN INFORMATION SYSTEM

2021 - 2025

- GPA: 8.77/10
- Awarded Academic Excellence Scholarship for 3 consecutive semesters (2021–2022); ranked Top 1 in class for 2 of those semesters.

Certifications

---

- **Mastering System Design: From Basics to Cracking Interviews** - Udemy Apr 2026
- **HackerRank SQL (Advanced) Certificate** - HackerRank Apr 2026
- **TOEIC 4-Skills Certificate:** Listening & Reading: 910/990, Speaking & Writing: 300/400 2024
